

Support sound sleep

The majority of patients with sleep apnea (55%) continued to report significant sleep disturbance despite four months of positive airway pressure (PAP) therapy.¹

Difficulties include

- frequent awakenings²
- getting used to the mask and air pressure while sleeping³
- feeling of claustrophobia²
- taking the mask off at night, either subconsciously or consciously³

Mask discomfort can be a significant barrier to successful PAP therapy⁴

Recognising this challenge, Breas set out to design masks that prioritise comfort without compromising stability or seal.

More comfortable sleep

Breas Apto® mask family

Softness Redefined

Be more™

Breas Apto F 01

Breas Apto N 01

No commitment without comfort

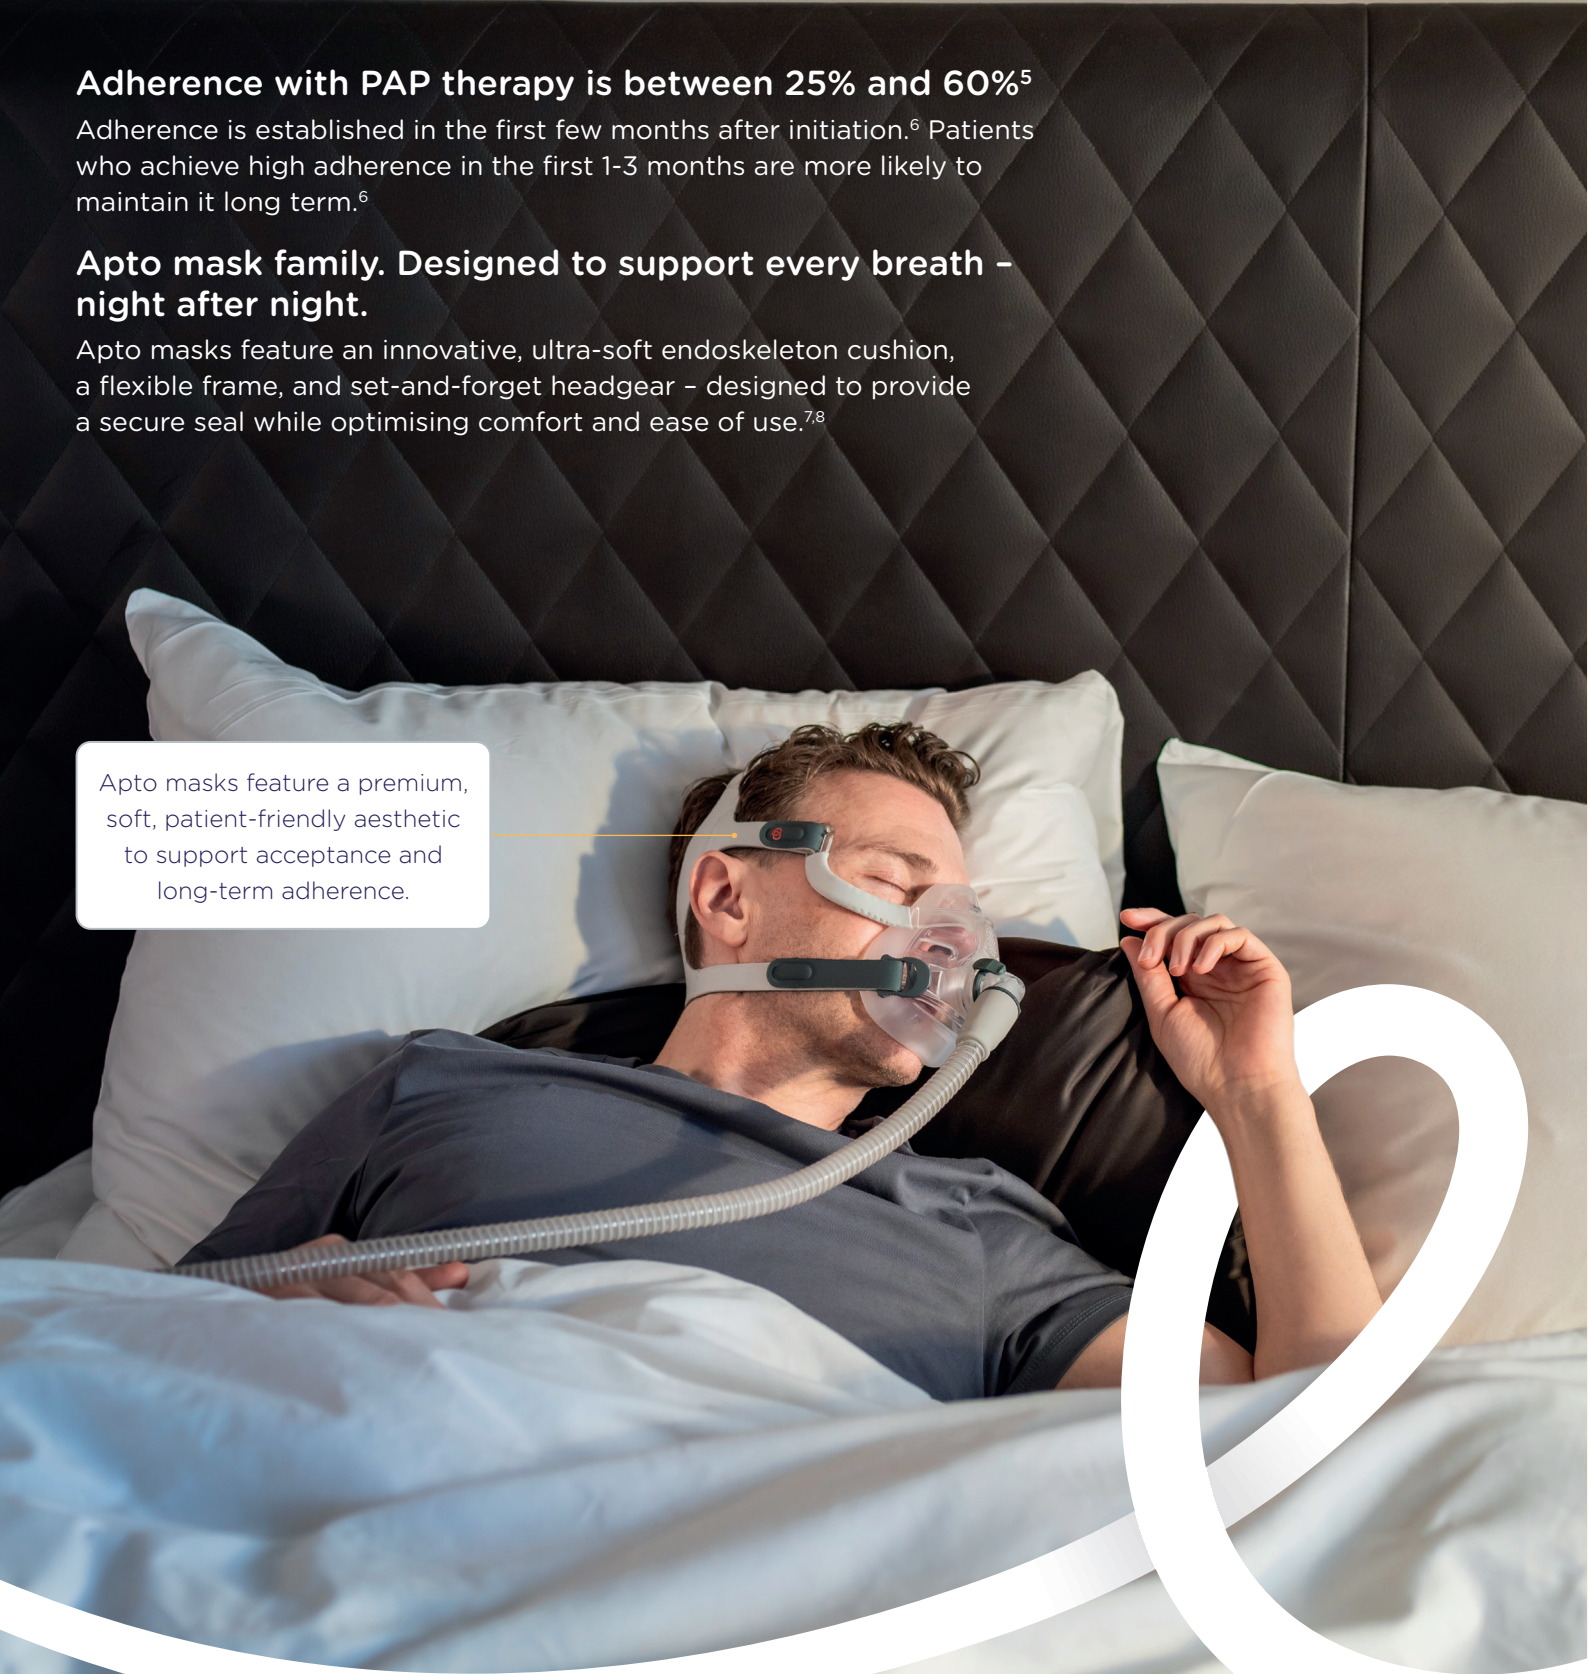

Adherence with PAP therapy is between 25% and 60%⁵

Adherence is established in the first few months after initiation.⁶ Patients who achieve high adherence in the first 1-3 months are more likely to maintain it long term.⁶

Apto mask family. Designed to support every breath – night after night.

Apto masks feature an innovative, ultra-soft endoskeleton cushion, a flexible frame, and set-and-forget headgear – designed to provide a secure seal while optimising comfort and ease of use.^{7,8}

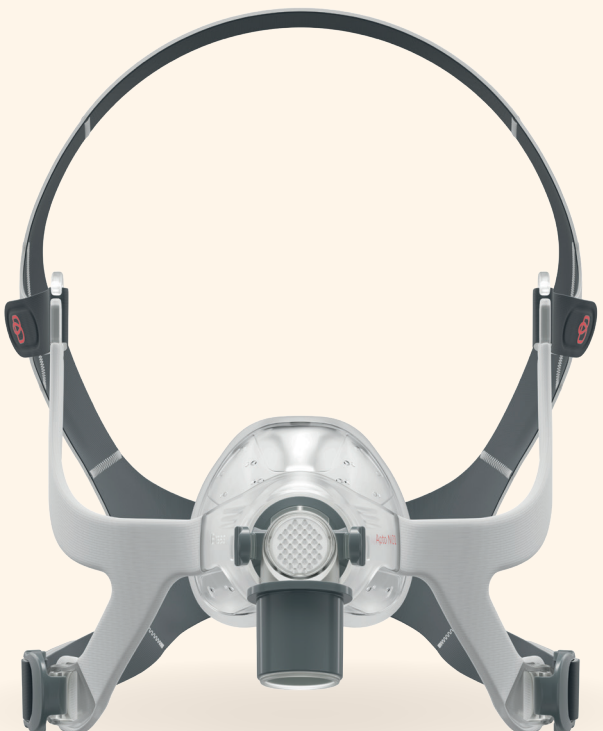

Apto masks feature a premium, soft, patient-friendly aesthetic to support acceptance and long-term adherence.

Premium softness. Comforting simplicity.

Breas Apto F 01 Full Face Mask

Breas Apto N 01 Nasal Mask

Soft and gentle against your skin

The cornerstone of the Apto mask family is the unique, patented endoskeleton – designed to precisely distribute seal force where needed to optimise seal quality while providing comfort and minimising red marks on the skin. The cushion's pearl-frosted finish is designed to feel better on moist skin without diminishing seal integrity.

Easy, secure fit

The endoskeleton, flexible frame, and breathable, padded headgear are designed to feel good and stay in place all night long. The endoskeleton cushion's adaptive arc profile means it can flex and adapt to a wide range of facial shapes.

Freedom of movement and unrestricted vision

The endoskeleton and the frame are both designed to support freedom of movement and unrestricted vision without compromising seal, stability, or comfort.

Unique, patented endoskeleton

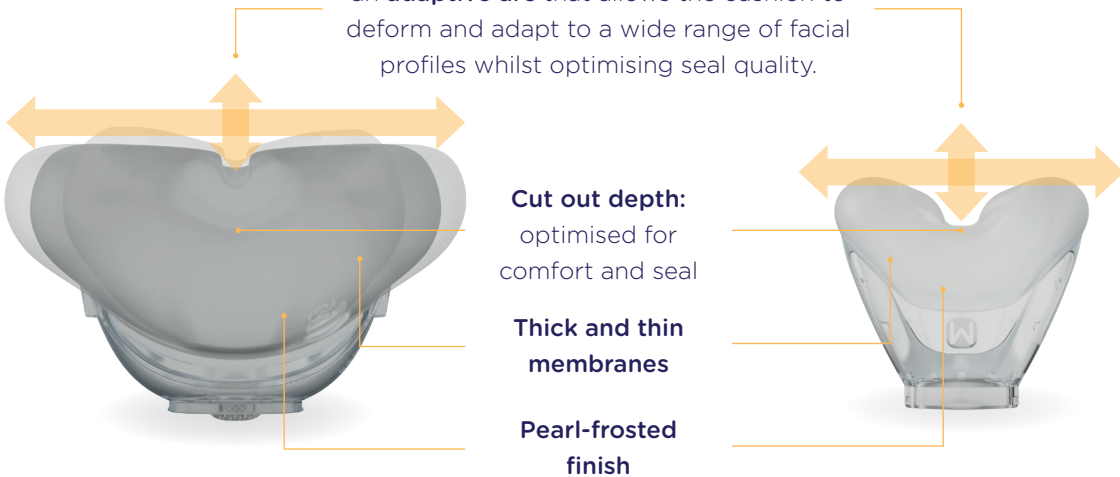

The Apto F 01 Full Face Mask and the Apto N 01 Nasal Mask feature a patented endoskeleton, which avoids hard plastic and uses flexible wings designed to support a secure seal throughout the pressure ranges whilst providing a soft, adaptable seal.

Breas Apto F 01 Endoskeleton

Breas Apto N 01 Endoskeleton

The ultra-soft endoskeleton cushion features an **adaptive arc** that allows the cushion to deform and adapt to a wide range of facial profiles whilst optimising seal quality.
