

# Environmental Policy

Breas is committed to minimizing environmental impact across our operations and value chain throughout the product lifecycle. This commitment, embedded in our Environmental Management System (EMS), aligns with the UN Sustainable Development Goals and our mission to enhance the quality of life for respiratory patients.

This policy applies to all Breas entities, employees, contractors, and partners, and provides a framework for setting and reviewing environmental objectives in line with our context, resources, stakeholder expectations, and legal requirements.

## Commitment

Breas is dedicated to protecting the environment, preventing pollution, and promoting sustainable development. We integrate environmental responsibility into decision-making, product design, and operational practices to ensure responsible resource use, climate action, and continuous improvement. Through our EMS, we commit to:

- Reducing our carbon footprint and supporting the global transition toward Net-Zero emissions;
- Enhancing resource efficiency and applying circular economy principles to minimize waste;
- Ensuring compliance with all applicable environmental laws, regulations, and other obligations;
- Establishing and monitoring environmental goals and objectives that drive measurable progress and continuous improvement through stakeholder engagement.

## Governance and Communication

The Sustainability Director oversees EMS implementation and progress tracking through measurable goals and KPIs. This policy is documented, communicated across the organization, published on the Breas Medical Group website, and reviewed during Management Review to ensure it remains relevant and effective.
